

Alpha 1 Induction Service Center, 1525 Old Alum Creek Drive, Columbus, Ohio 43209

Alpha 1 Induction Quality Coil Repair Service

Alpha 1 Induction Service Center has over twenty years of experience in manufacturing and repairing induction load coils of all types. We specialize in coils for the forging industry. Alpha 1 has the knowledge and experience that you can trust to design, build and repair your coils. We use only the highest quality materials: OFHC copper tubing, insulated with the right dielectric coating for your application, cast in our special high strength formulation refractory material and our proprietary stellite rail coating process.

Quality Workmanship

Coated Coil Windings

Alpha 1 coats the copper windings with a variety of materials based on the application to further extend the life expectancy of your induction coils.

Coil ID

Alpha 1 can provide replacable coil liners for ease of maintenance or our special formulation cast refractory material ID's for greater durability.

Coil End Boards

Alpha 1 can precision machine or refractory cast end boards for your induction coil set.

Coated Billet Guide Rails

Alpha 1's billet guide rails are coated to increase wear resistance and keep your forging line running longer between repairs.
